

factor

PCA

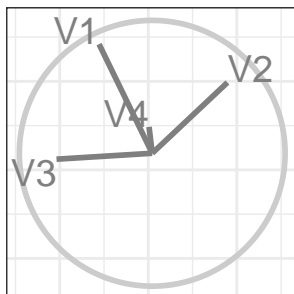

Discrete jump to selected pair

Levels of the block

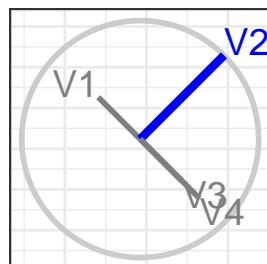

grand tour

Animation through random bases

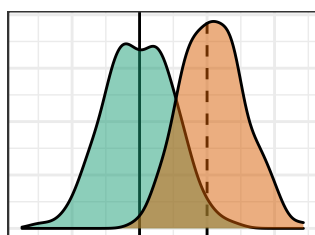

radial tour

Animation changing contribution of selected variable

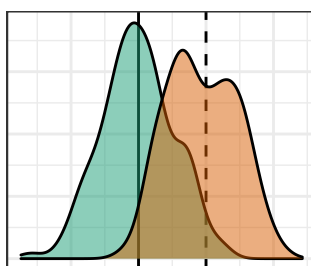

location

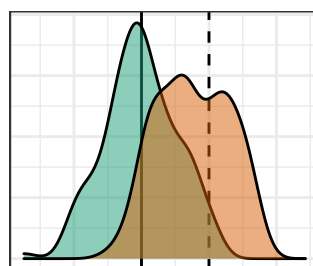

0/100%

 $1 \cdot V1 + 0 \cdot V2$
 (signal & noise respectively)

33/66%

 $.866 \cdot V1 + .5 \cdot V2$

50/50%

 $.7071 \cdot V1 + .7071 \cdot V2$

shape

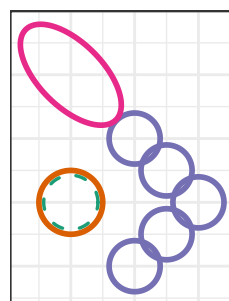

EEE

EEV

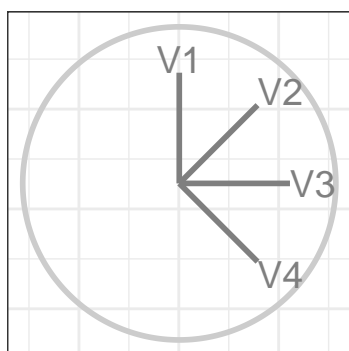

EVV, banana transformed

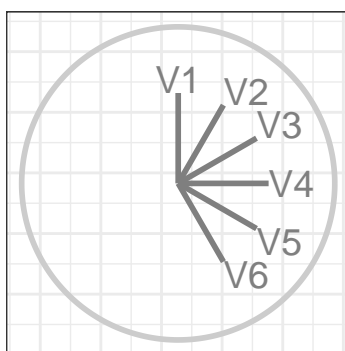

dimension

3 cluster in 4 dim

4 cluster in 6 dim

Cluster 'd', above, only exists when there are 6 dim, is spherical like the noise dim, but has cluster separation behind the plane of the other 3 isodensities.
